UAV possess a local threat and high risk for urban populations or urban air traffic in various countries. Therefore, UAV operators require precise training, operational efficiency, maneuvering, attitude control & monitoring, and safe handling practice. UAV simulators provide complete pilot training through software with actual communication, navigation, control, and safe take-off & landing for different purposes. For example, military UAVs are handled or operated by trained pilots after completing numerous hours of actual training on simulators for intelligence, surveillance, and reconnaissance (ISR) missions & operations.
