Abstracts

Ultrafine calcium carbonate also named nano calcium carbonate, it is used as a filler in polymeric materials in order to improve their impact resistance. Nano calcium carbonate particles have a wide range of industrial applications due to their beneficial properties such as high porosity. The product is widely used as a raw material for the manufacturing of cement, adhesives, and sealants. Nano Calcium Carbonate has many special properties than ordinary calcium carbonate. Therefore, Nano-calcium carbonate is a functional inorganic filler, which not only has the effect of increasing product volume, reducing product cost, but also has excellent reinforcing properties.
