## Abstracts

Ultrasonic Machining Equipment is a Type of Subtractive Manufacturing Equipment That Removes Material from the Surface of a Part by High-frequency, Low-amplitude Vibration of the Tool Against the Surface of the Material in the Presence of Fine Abrasive Particles. Ultrasonic Machining Equipment Can Produce High-precision Parts Made from Hard, Brittle Materials That Are Normally Difficult to Machine: Ultrasonic Machining Can Produce Fragile Materials That Cannot Be Processed by Alternative Methods Such As Electrical Discharge Machining and Electrochemical Machining, Such As Glass and Non-conductive Metals; the Ultrasonic Welding Head of Ultrasonic Machining Equipment Does Not Generate Heat to the Workpiece, There is No Deformation of the Processed Material, and the Physical Properties of the Produced Part Will Always Remain Consistent. In Addition, No Burrs Are Produced During Processing, So Fewer Operations Are Required to Produce Finished Parts.
