## Abstracts

Uninterruptible Power Supply (UPS) devices keep computer systems and IT equipment safe and operable during power surges and breakdowns. When the flow of electricity dips to an inadequate voltage or ceases, an uninterruptible power supply system (UPS) provides battery backup power. Backup power is given for a set period, depending on the size and technology of the UPS unit, until generators can be engaged or network components can be appropriately shut down. Computers and accessories are safe from damage when electricity flows freely. A UPS unit can efficiently protect a single device or an entire data center.
