Stripping is one of the most effective methods for heat recovery and reuse in the process. This concept offers significant advantages for recycling owing to its basic design and easy monitoring. In the recycling process of urea plant, factors such as, flow scheme; number of process equipment required, amount of water recycled in carbamate solution and; overall plant efficiency play a vital role. In a urea plant, a urea stripper's function is to decompose carbamate into ammonia and, carbon dioxide from urea solution leaving the reactor. The urea stripper operates under full system pressure and is configured in a way so that it provides maximum gas-liquid contact.
