## Abstracts

Urinary Tract Infection Testing Strip or dipstick test is a basic diagnostic tool. The strips are fast and accurate and are color-coded. A reagent that reacts to certain pathogens in urine is added in the urinalysis test strips. This will cause a reaction that results in different colors, each of which indicates whether a disease is present in your body or not. The urinalysis test strips consist of a ribbon made of plastic or paper of about 5 millimeters wide. Plastic strips have pads impregnated with chemicals that react with the compounds present in urine, producing a characteristic color. For the paper strips, the reactants are absorbed directly onto the paper.
