Urine drainage bags are used for urine collection. This bag is attached to sheath or catheter (tube) that is inside the bladder of an individual. Urinary drainage bags are used by patients suffering from urinary retention, urine incontinence, urological, or gynecological surgeries in which a patient is unable to move from one place to another and has difficulties in urinations, or other health related issues. A urinary catheter is placed inside the bladder through the urethra. It is held in the bladder by a small, water-filled balloon. The catheter is connected to a bag to collect urine that drains through the catheter.
