Abstracts

The utility customer information system (CIS) market is composed of utility companies looking for commercial off-the-shelf (COTS) software packages that address business-critical utility meter-to-cash (M2C) and customer service business processes. M2C functions covered include: account maintenance, order processing, product/service management, rate design, billing, credit collection, accounts receivable, statement preparation, and payment processing. For customer service, CISs support multiple client interaction channels — such as call centers, interactive voice response/voice response units (IVR/VRUs). They also support various digital engagement channels (social media and, more recently, virtual assistants/chatbots) — as well as customer self-service needs.
