Abstracts

UV Conformal Coating can form a moisture-proof insulating coating on the surface of the article to prevent the circuit board from being corroded and damaged due to moisture, condensation, oil, dust, etc. Through UV irradiation, the film can be formed within 5~10 seconds, which greatly improves the production efficiency. By spray coating, high moisture resistance and excellent electrical properties are maintained even in thin film conditions. No solvent, no volatile substances VOC, harmless to the environment, and can also reduce occupational hazards to operators.
