Abstracts

UV Laser Printer belongs to a series of products of laser marking machine, but it is developed with 355nm ultraviolet laser. Compared with infrared laser, the machine adopts third-order intracavity frequency doubling technology. To a large extent, the mechanical deformation of the material is reduced and the thermal influence of processing is small, because it is mainly used for ultra-fine marking and engraving, especially suitable for food, medical packaging material marking, micro-hole drilling, high-speed division of glass materials and silicon wafers for complex pattern cutting and other applications.
