Abstracts

Plastic caps and closures are used for the packaging of different cosmetics, fragrance, and skincare products such as lipsticks, perfume bottles, moisturizers, make-up kits, and others. The metallization of these plastic caps and closures is generally done through physical vapor deposition (PVD) sputtering. In order to protect the metallized layer and hide imperfections created on the surface of plastic caps and closures during the production process, ultraviolet (UV) curable coat is applied on them.
