Abstracts

Ultraviolet (UV) oxidation is a destruction process that oxidizes organic contaminants in water. It works by the adding oxidizing agents such as ozone (O₃) or hydrogen peroxide (H₂O₂) to the contaminated groundwater. The contaminated solution is passed through a chamber where it is exposed to intense UV radiation. UV radiation is provided by UV light bulbs. Oxidation of target contaminants is caused by direct reaction with the oxidizers and through the action of UV light in combination with ozone and/or hydrogen peroxide.
