Abstracts

Put the vacuum circuit breaker into the metal cabinet to form a vacuum switch cabinet. In addition to circuit breakers, the switchgear should also install isolating switches for isolating circuits, grounding switches for safety protection, current transformers and voltage transformers for measurement or protection, and lightning arresters for overvoltage protection. RC absorber, and the secondary circuit components and lines for relay protection are also installed. Lead cables or overhead lines can enter the cabinet, making the switch cabinet a power distribution device with relatively independent combined functions.
