A Vapor Degreasing machine essentially refers to a component degreasing machine which uses solvents as a cleaning agent as well as a drying agent for the component post cleaning.

Vapor degreasing is the cleaning process which involves condensing solvents vapors on the object that is being cleaned. The process doesn't require any water or scrubbing. Instead, the vapor-degreasing machine uses solvent vapors to cleanse and remove contaminants from parts. This process is used to clean various materials during the manufacturing process such as plastic, glass, metal, gold, and ceramic.
