## Abstracts

Vinyl siding is plastic exterior siding for houses and small apartment buildings, used for decoration and weatherproofing, imitating wood clapboard, board and batten or shakes, and used instead of other materials such as aluminum or fiber cement siding. It is an engineered product, manufactured primarily from polyvinyl chloride (PVC) resin.

Low price and minimal upkeep make vinyl by far the most widely sold siding material. Vinyl needs no painting. It won't warp or twist, and it's impervious to insects and water. But it can rattle, crack, melt, and burn. Some vinyl products may look like wood from a distance, but not up close.
