Abstracts

Vehicle Cabin air quality sensors are used to keep track and monitor the quality of air inside the vehicle cabin. There has been a considerable reduction in the cabin emissions with the effective use of automotive cabin air quality sensors in the global market. Furthermore, requirement of enhanced air quality inside the vehicle has backed the growth of automotive cabin air quality sensors market. Driver and the vehicle passengers are often exposed to high level of hazardous pollutants and gases, especially in today's urban areas and cities where the pollution level has reached to an alarming limit. Likewise, growing exhaust emissions coupled with the increasing wear particles make the passengers more vulnerable to the interior pollution. The rising interior emission of hazardous pollutants has led to significant increase in respiratory problems among the consumers. With the use of effective filtration systems combined with a cabin air quality sensor, entry or inflow of foreign particles such as pollen grains, road dust, diesel soot, etc. can be reduced inside the vehicle.
