## Abstracts

Vehicle routing and scheduling is a mature market. Fleet routing and scheduling solutions are specialized transportation management applications aimed at organizations that directly or indirectly control and manage shipping assets and resources. These tools are typically used to develop route plans that meet the delivery objectives at minimal cost/mileage based on the firm's input (such as from orders), rules and constraints. The aim is to minimize transportation costs while satisfying feasibility constraints as to when and where stops are made, what can be loaded in each vehicle, and what routes drivers can serve.
