Vehicle-to-grid, or V2G technology, is defined as a system that is capable of controlling the bidirectional flow of electricity between the vehicle and the grid. Electricity flows from the grid to the vehicle to charge the battery. Also, electricity can flow back from the vehicle to the grid when required. A majority of the time, electric vehicles are not in use. During this idle time, the batteries of these vehicles can be utilized for supplying electricity back to the grid.

Since the V2G technology has only been commercialized in 2020, and has not yet been commercialized on a large scale, the report predicts and analyses revenue data for 2020-2030
