Abstracts

The veneer sheets always remain in the natural order as they emerge such that all parts of the original log are kept together. One by one the slices of veneer carefully enter the dryer, where they are dried evenly within a few minutes. Air temperature of up to 320°F at high velocity is blasted on the surface. The veneer must be dried in such a way that it has at least 8-12% of moisture content. Veneer Sheets are used for many applications. These veneers are laid up in various wood cuts. 20mil or 30mil Paper-Backers are also available at an up-charge.
