Abstracts

A thorough and systematic examination is important in ophthalmology as in other areas of veterinary medicine. Generally, an exam should start with the outer periocular area and then proceed to an intraocular exam is recommended. Initial observation of the symmetry of gaze and visual capacity can be performed while talking with the owners. An obstacle course using objects in the room, such as trash cans and chairs, may also be performed under both light and dark room conditions if the owners report visual abnormalities.
