Abstracts

The prevalence of internal injuries and other diseases, including cancers in abdominal blood, cysts and companion animals (such as cats, dogs, horses) and livestock (such as cattle, pigs, etc.) , and the increased demand for diagnoses of those diseases are expected to drive the market growth. Ultrasound machines can help doctors detect tumors in certain internal regions of the body that are not well seen on x-rays. In many cases, veterinarians use ultrasound to guide the needle during a biopsy. Ultrasound equipment is widely used because it is a risk-free and painless way to look at an animal's internal organs.
