Vibratory Filling Machines are also known as vibratory fillers. Vibratory filling machines allow continuous filling of the material into the packaging product. The machines filling operation is not affected due to the size and shape of the granule. The machine comprises of three essential parts- the hopper, feeder, and weighting system. The material that needs to be filled is fed in the hopper, through the hopper, the material enters to the feeder, the vibratory feeder has trays. The microcontroller controls the speed of the tray. Microcontroller maintains the speed of the tray, to the required filling speed. Then, the material travels from feeder to the weighing system. The required quantity is weighted and filled up in the packaging product.
