Abstracts

Vital Signs Monitors is a special device that is used for keeping track of the vital signs of patient's health. This patient monitoring equipment is generally used in different hospital departments to monitor patients in their beds. The equipment measures blood pressure, etc. temperature, respiration rate and other data.

As for the new monitors, they are generally equipped with much better ECG filtering, as well as accurate NIBP – non-invasive arterial blood pressure. The integrating parameters enable monitoring on one display that speeds up the clinician's decision-making process.

Monitoring of vital parameters can include several of the ones mentioned above, and most commonly include at least blood pressure and heart rate, and preferably also pulse oximetry and respiratory rate.
