Abstracts

Voice-Directed Warehousing Solutions enable warehouse holders to manage their distribution centers with the help of voice-directed systems. These systems support two processes, namely speech recognition and speech synthesis. The operator is provided a headset and a voice terminal, and is guided through each step by voice commands with the help of speech recognition technology. The speech synthesis technology enables the system to understand a user's response. Voice-directed systems guide through all the locations and help the staff pick orders accurately, thereby reducing errors and increasing labor productivity.
