Voice over long-term evolution (VoLTE) is a technical specification that defines the standards and processes used to deliver voice communications and data over 4G LTE networks. This is a way to create, configure, and manage high-speed voice, video, and messaging services on 4G wireless networks for mobile and portable devices. It uses the spectrum more efficiently than traditional speech; Meet the growing demand for richer, more reliable services; Eliminating the need to have voice on one network and data on another; Using IMS as a universal service platform to unlock new revenue potential; It can be deployed in parallel with video calls on LTE and RCS multimedia services, including video sharing, multimedia messaging, chat and file transfer.
