Abstracts

Wafer Grinding Tapes is used to protect the wafer surface during back grinding after the IC is formed on the wafer. Attached on the circuit surface, it prevents damages to the circuit surface and pollutions to the wafer surface and improves the grinding accuracy of the wafer. Especially, it can perfectly protect the wafer pattern surface and the chip during the manufacturing process with its excellent physical and chemical properties. With developments of jumbo-sized and thinned wafer and high-bumped wafer, the function required to the BG tape are (1) low contamination levels, (2) highly close contact to wafer-, and (3) easiness of peeling.
