## Abstracts

A wall plastering machine is a machine that automatically plasters walls, and is a special painting equipment for construction projects. The principle is to control the airflow through an electric motor, pressurize the inhaled paint, and deliver the paint to the spray gun of the plastering machine through a high-pressure hose, which releases the paint to the surface of the object to be painted after instant atomization. The plasterer can be used for flooring, masonry and rendering.
