## Abstracts

Cabin Air Filter has usually folded paper or some combination of paper and fibers. They are often rectangular or nearly square in shape and are simply a physical barrier to trap dust, pollen, leaves, and other debris, reducing the flow of chemically contaminated air that makes it into the ventilation and air conditioning system. The particles accumulate on the surface of the filter and eventually cake up, forming their own layer, restricting the flow of incoming air. To keep the air clean in the cabin, these filters are intended to be discarded at least annually.
