Smart Metering provides more detailed information than does the older, related Automatic MeterReading (AMR) system. Water smart metering communicates its monthly or daily consumption to a central collector using one of several different communication technologies (such as radio signals, power line communications, or satellite readings). In other words, all they did was replace meter readers with some sort of centralized collection. Smart meters use more robust communication channels controlled from a central point and can be used as needed at any time. It accommodates interval data collection and facilitates the delivery of various services, such as remote disconnection and checking to ensure currently available services.
