## Abstracts

Waterproof coatings are synthetic chemicals that can be applied to a variety of surfaces and substrates to make them waterproof or water-resistant. The application of the coating on surfaces is called the waterproofing process, which is applied to various roofs, walls and other surfaces to improve their water resistance and reduce the negative effects of water on the infrastructure. The membrane is a solid-based layer of waterproof material that can be applied to various surfaces to improve its waterproof function and make it waterproof. This layering is also achieved along the edges throughout the surface so that no water flows from the external environment to the surface.
