Abstracts

Spent Nuclear Fuel is the used nuclear fuel which is irradiated in a nuclear reactor. Isotopic constituents of the spent fuel get considerably changed after the nuclear reaction and the fuel can be used in other thermal reactors accordingly. Spent nuclear fuel management is one of the most critical issues for nuclear power plants across the world. Spent nuclear fuel is stored for a long duration before the final disposal. Wet storage of spent nuclear waste has been practiced for a long time, owing to feasible properties of water for shielding and heat removal. Wet storage pools are designed with the help of proven technology and proper engineering. These pools can retain water; they are leakage proof; and they emit low radiation to the site personnel.
