With wired microphone, what you put into it is what you get out of it. A high quality mic capsule well matched to voice or instrument is the best possible way to get quality sound. With wireless microphone, you are often limited in the selection of mic capsules, limiting your ability to try different microphones to find the best match. Many wireless microphones use companding to compress dynamic range into a small frequency allocation. There can be a noticeable difference between vocals and instruments on a wireless microphone versus a wired microphone.
