Before the invention of the wireless LAN WLAN, people want to communicate and communicate through the network. We must first use the physical cable - copper strand to form an electronic operation path. In order to improve the efficiency and speed, then the optical fiber was invented. When the network has developed to a certain scale, it is found that this cable network is very difficult to be set up, disassembled or restructured on the original basis, and the cost and cost are very high, so the networking mode of WLAN emerges as the times require.
