## Abstracts

A self-organizing network (SON) is a framework that automates some planning functions as well as maintenance functions for mobile networks. Its main goals are to enable self-configuration, self-optimization and self-healing of radio network elements. It also minimizes interference between adjacent cells and between macro and small cells. SON is an automation technology for the operations and maintenance (O&M) of LTE networks, defined in Third Generation Partnership Project (3GPP) Release 8 and onwards (as such, W-Fi support is not natively included in 3GPP's definition of SON).
