Abstracts

Wood chip heating systems efficiently burn fuel to heat vast spaces through radiant heating or forced air systems. They can also be used to heat hot showers, swimming pools, hot tubs and other commercial purposes. Wood chips, especially in Europe, have emerged as a viable and promising renewable energy alternative to coal. Large-scale production of wood pellets for heating and power generation. Oak pellets are mainly used for heating wood pellets because of their lower ash content. Wood chips made entirely from cork sawdust are the best wood pellets for heating, as they produce less fumes and residues, help save time on maintenance and cleaning, and also prevent contamination of the environment.
