Abstracts

Workload scheduling and automation software are tools used to automate IT processes to simplify workflows. This software can help developers automate and integrate business and IT processes, separate tasks and scripts distributed across server environments. In addition, the workload scheduling and automation software eliminate the need to script manually and manage cross-system dependencies so that changes are associated with workflows when needed. This allows IT departments to speed up the application delivery process and thus shorten the time IT takes for the product to come to market.
