Abstracts

X-Ray stress analyzer can nondestructively measure the residual stress at the specified point and direction of the material surface in a short time, and has the function of determining the magnitude and direction of main stress. The algebraic sum of residual stress and load stress, i.e. the actual stress, is measured under load condition. Suitable for all kinds of metal materials through a variety of processes (such as casting, forging, welding, grinding, turning, peening, heat treatment and various surface heat treatment) made of components. The system is suitable for laboratory test and research work due to its complete functions, and for field measurement due to its portability and flexibility.
