## Abstracts

YAG is an acronym for yttrium, aluminum, and garnet, YAG laser welding is a typical form of solid-state laser welding.

YAG Welder Machine uses high-energy pulsed laser to weld the workpiece. It uses a pulsed xenon lamp as the pump source and ND:YAG as the laser working substance. The laser power supply first pre-ignites the pulsed xenon lamp, and discharges the pulsed xenon lamp through the laser power supply, so that the xenon lamp generates light waves of a certain frequency and pulse width. It is a 1064nm pulsed laser. The laser is transmitted through the optical fiber, focused and then radiated to the surface of the workpiece, so that the workpiece is partially melted to achieve welding.
