Abstracts

Zero calorie sweeteners are ingredients that are many times sweeter than sugar (sucrose). Examples include acesulfame-K, aspartame, saccharin, stevia and sucralose which are between 150 and 600 times sweeter than sucrose, and neotame which is between 7,000 and 13,000 times sweeter (Table 1). The sweetness intensity of low calorie sweeteners depends on their inherent sweetening power and the concentration at which they are used. The calorie content varies from zero to 4 kilocalories per gram, but all deliver very few calories in practice because they are added to products in only tiny amounts. Low calorie sweeteners are typically found in soft drinks, desserts, dairy products, confectionery, chewing gums and hot chocolate drinks. Most are also available as table top sweeteners, which are used in tea and coffee or on other foods, such as fruit and breakfast cereals.
