Abstracts

In-building wireless solutions refer to a set of products, services, utilized to build an in-building network for reliable and seamless indoor coverage. The in-building wireless solutions assist in creating a more engaging business environment with no dropped calls and high-speed data connections. Overall, it supports organizations to deal with multiple factors, such as coverage, capacity, scalability, security, and quality of services. The in-building support the sophistication of available communication services to suit the customer needs of pervasive coverage, always-on connectivity and project-oriented business models.

In-building wireless solutions enable uninterrupted voice and data communication services. These solutions provide a foundation to ensure effective operability of communication systems. The in-building wireless market report segments the market on the basis of solution, system components, end-user, and geography.

The in-building wireless market has been segmented by type of system components into antennas, cabling, Distributed Antenna Systems (DAS), repeaters, and small cells. These components are used for boosting the indoor coverage and capacity to address the shift in the voice and data usage patterns caused on account of the mobile technology penetration and rapid uptake of smart phones, tablets, netbooks and other handheld devices. In the competitive in-building wireless ecosystem, the market players are investing in acquisitions and new technologies to offer innovative value additions to their existing product portfolio.

The owners/managers of large, medium, and small-sized buildings are strategically analyzing the in-building wireless solutions for their existing as well as new buildings to ensure pervasive coverage for occupants and create an excellent facility to deliver improved customer satisfaction. The in-building wireless solutions are gaining traction in the small-sized building market with the advent of small cell technology. The report analyzes the adoption of these solutions across existing and new buildings of large, medium, and small sizes.

Some of the main end-users are the commercial, government, hospitals, hospitality, industrial, institutions, and retail sectors, wherein the in-building wireless solutions are deployed to address the coverage and capacity issues, public safety mandates, and deliver mobility to occupants. The in-building wireless market report forecasts and analyzes the solution uptake for these end-user segments.

The report analyzes the in-building wireless market for the European region. MicroMarketMonitor has assumed certain factors related to economy, technological developments, investments, market saturation, and government regulations, among others, for market sizing and forecasting.
