## Abstracts

The Latin American Agricultural Micronutrients market was valued at \$385.7m in the year 2013, to grow at 9.3% annually. It is projected to reach \$602.1m by the end of 2018. The Latin America agricultural micronutrients market has been segmented on the basis type, application, crop type, form, and geography. On the basis of type, the Latin America agricultural micronutrients market has been segmented into zinc, copper, iron, boron, manganese, molybdenum, and others. On the basis of application, the Latin America agricultural micronutrients market has been segmented into soil, fertigation, foliar, and others (which include hydroponics and seed treatment). Apart from type and application, the market for agricultural micronutrients in Latin America has also been segmented on the basis of crop type into cereals, oilseeds & pulses, fruits & vegetables, and others (which include plantation and floriculture, among others). Further, the market has been segmented on the basis of forms into chelated and non-chelated segments. Among forms, the non-chelated segment accounts for the largest share in the Latin America agricultural micronutrients market, owing to lower cost of non-chelated agricultural micronutrients as compared to chelated agricultural micronutrients. The market has been further segmented on the basis geography into Brazil, Argentina, Colombia, and rest of Latin America.
