Abstracts

The Evidence Management Market size is estimated at USD 8.71 billion in 2024, and is expected to reach USD 14.53 billion by 2029, growing at a CAGR of 10.78% during the forecast period (2024-2029).

The evidence management market witnessed a surge in demand, primarily fueled by the imperative need for secure and efficient handling of both digital and physical evidence, especially in the realms of law enforcement and legal sectors. This demand is propelled by the escalating instances of digital crimes, advancements in forensic technologies, and a heightened requirement for streamlined case management solutions.

Key Highlights

Body-worn cameras have emerged as a favored tool for law enforcement agencies worldwide. They not only bolster evidentiary outcomes and officer safety but also foster better interactions between law enforcement and the public. These cameras play a pivotal role in broader law enforcement strategies, problem-solving, and community engagement initiatives.

Cloud-based solutions, coupled with the integration of AI and blockchain technologies, are pivotal in bolstering security and transparency in evidence management. The emphasis is on ensuring the integrity, accessibility, and compliance of the evidence-handling processes. The trend is shifting from managing evidence data on spreadsheets to centralized repositories with robust custody chains and alert systems.

With the global increase in vehicle numbers, automobile accidents have become a stark reality. Governments worldwide, in response to rising accidents and car thefts, have mandated the installation of dashcams. Consequently, the global adoption of vehicle dash cameras has seen a significant upsurge, presenting lucrative market growth opportunities. The Digital Evidence Management System is gaining trust due to its secure sharing options, AI-assisted features, and customizable deployment, further fueling the market's growth.

In March 2024, General Atomics Electromagnetic Systems (GA-EMS) unveiled its latest innovation, the Full Spectrum Imaging System (FSIS) Crime Scene Examiner (FSIS-CSE). This system, a part of GA-EMS's renowned line of crime scene latent evidence detection and image capture systems, features a lightweight, compact design. It houses the FSIS II camera on a 13-inch tablet, enabling it to capture high-resolution images of latent evidence, including chemical, biological, and trace elements, even in confined spaces like vehicles and small offices.

While the benefits of digital evidence management are evident, the system's vulnerability to cyber threats remains a critical concern. A single instance of data tampering could pose significant challenges for law enforcement. Given that data originates from diverse sources like text messages, emails, and online transactions, ensuring the system's tamper-proof nature is paramount. Moreover, the shortage of skilled professionals and the intricate nature of cybercrimes present notable challenges for the digital evidence management market.

Post-COVID-19, the evidence management market is poised for substantial growth. This growth is underpinned by the surging demand for AI, ML, and IoT in the industrial sector, particularly in bolstering critical infrastructure protection. Notably, advancements in AI, peripherals, and the widespread adoption of 5G networks are ushering in a new era, replacing traditional video surveillance with cloud-based, AI-driven solutions.

Evidence Management Market Trends

The Cloud Deployment Segment is Expected to Hold a Significant Share in the Market

The evidence management market is witnessing a surge, propelled by the increasing adoption of cloud technology. Cloud solutions are pivotal in bolstering accessibility, scalability, and security for law enforcement and legal entities. These platforms enable efficient storage, management, and sharing of vast digital evidence, fostering collaboration, cutting storage costs, and ensuring compliance with data protection laws.

Remote and real-time access to evidence expedites decision-making and streamlines investigations. Moreover, cloud platforms offer advanced features like automated tagging and AI-driven analytics, enhancing the reliability and effectiveness of evidence management.

Security is paramount in cloud-based evidence management. Data centers and networks adhere to rigorous cybersecurity standards for global accreditations. Leading providers, such as Microsoft Azure, actively monitor for anomalies and employ internal "hackers" to preempt cyber threats.

Integration is a key strength of cloud-based evidence tools. By seamlessly interfacing with body-worn cameras, CCTV systems, and case management platforms, they boost operational efficiency and data interchange, underlining their value to law enforcement and legal departments.

Vehicle dash cams are crucial for insurance claims and capture events clearly, aiding in claims processing. Notably, many dashcam vendors now offer cloud-based software, reflecting a rising trend toward cloud deployments.

Cloud systems offer scalability, allowing law enforcement agencies to expand their storage capacities swiftly. This trend fuels the demand for cloud-based event management systems across various industries. Hybrid cloud storage, increasingly popular, is now the dominant storage method, with over 50% of data residing in the cloud for companies of all sizes, as reported by Virtana in 2023.

North America Holds the Largest Market Share

The North American evidence management market has witnessed rapid evolution. This transformation is largely attributed to the surge in federal funding programs in the United States, specifically aimed at law enforcement body-worn cameras. These funding injections, coupled with subsequent initiatives, have not only accelerated but also significantly boosted the shipments of body-worn cameras, with the US leading the charge. Today, over half of US police departments are actively piloting body-worn camera programs.

As multimedia sources, such as photos and videos from mobile phones, GPS data,

CCTV footage, SMS, and ANPR, become pivotal in criminal investigations, the demand for robust evidence management solutions is on the rise. Cloud technology adoption is on the rise among US law enforcement agencies, a direct response to the escalating volume of digital evidence they handle daily.

Furthermore, the utilization of digital evidence has not only enhanced citizen safety in the US but has also fundamentally reshaped the landscape of criminal investigations. Investigators now heavily rely on digital evidence, given the ubiquitous presence of cameras, smartphones, tablets, and laptops and the sheer volume of digital content like emails, messages, social media posts, and photos. This surge in digital evidence availability is a key driver behind the market's growth trajectory.

Moreover, recognizing the market's potential, numerous businesses and startups are ramping up investments to bolster their presence and drive adoption rates. Established players are innovating, with offerings like dash cameras for cars and enhanced body-worn cameras, aiming to diversify their portfolios and capture a larger market share.

For instance, in March 2024, BRINC, a US-based technology developer focused on public safety, unveiled BRINC LiveOps. This software, accessible via any modern browser, is designed to enhance efficiency, coordination, and effectiveness in public safety drone operations. By consolidating the features of BRINC's hardware products into a unified platform, LiveOps significantly boosts evidence management, situational awareness, and operational efficiency for entire public safety teams.

Similarly, in April 2024, Wrap Technologies Inc., renowned for its BolaWrap and cutting-edge public safety solutions, introduced an artificial intelligence product suite tailored for its Wrap Intinsic Body-Worn Camera and Digital Evidence Management (DEMS) platform. This suite promises to streamline operations for police departments and private security firms worldwide, leveraging AI, virtual reality, and data-driven solutions.

Evidence Management Industry Overview

The evidence management market is highly fragmented, with major players like NICE Ltd, QueTel Corporation, Police1 (Lexipol), Hitachi Vantara Corporation, and Panasonic Corporation. Players in the market are adopting various significant strategies, such as partnerships, new product launches, and acquisitions, to augment their product offerings and gain a sustainable competitive advantage.

April 2024: Utility Associates Inc. (Utility) and STRAX Intelligence Group signed a strategic partnership linking Utility's all-in-one digital evidence management system with STRAX's real-time crime center platform and integrations. Together, they're bringing to market a unified ecosystem, allowing faster incident response utilizing real-time intelligence and greater investigative capabilities to solve crimes more effectively.

January 2024: Axon, the worldwide public safety technology provider, introduced a new generation of body cameras primarily built for frontline workers in healthcare facilities and retail stores. Axon Body Workforce is customizable, lightweight, and integrated with Axon's real-time operations and evidence management technology.

Contents

1 INTRODUCTION

- 1.1 Study Assumptions and Market Definition
- 1.2 Scope of the Study

2 RESEARCH METHODOLOGY

3 EXECUTIVE SUMMARY

4 MARKET INSIGHTS

- 4.1 Market Overview
- 4.2 Industry Attractiveness - Porter's Five Forces Analysis
 - 4.2.1 Threat of New Entrants
 - 4.2.2 Bargaining Power of Buyers/Consumers
 - 4.2.3 Bargaining Power of Suppliers
 - 4.2.4 Threat of Substitute Products
 - 4.2.5 Intensity of Competitive Rivalry
- 4.3 Major Policies and Regulations
- 4.4 Value Chain Analysis
- 4.5 Assessment of Impact of COVID-19 on the Evidence Management Market

5 MARKET DYNAMICS

- 5.1 Market Drivers
 - 5.1.1 Rising Crime Rate Globally is Leading to Market Expansion
- 5.2 Market Restraints
 - 5.2.1 Data Stored can be Tampered, Affecting the Security of Data

6 MARKET SEGMENTATION

- 6.1 By Deployment
 - 6.1.1 On-premise
 - 6.1.2 Cloud
- 6.2 By Component
 - 6.2.1 Hardware
 - 6.2.1.1 Body-worn Camera

6.2.1.2 Vehicle Dash Camera

6.2.1.3 Citywide Camera

6.2.1.4 Public Transit Video

6.2.2 Software

6.2.3 Services (Consulting, Training, and Support)

6.3 By Geography***

6.3.1 North America

6.3.2 Europe

6.3.3 Asia

6.3.4 Australia and New Zealand

6.3.5 Latin America

6.3.6 Middle East and Africa

7 COMPETITIVE LANDSCAPE

7.1 Company Profiles*

7.1.1 NICE Ltd

7.1.2 QueTel Corporation (Omnigo)

7.1.3 Police1 (Lexipol)

7.1.4 Hitachi Vantara Corporation

7.1.5 Panasonic Corporation

7.1.6 Motorola Solutions Inc.

7.1.7 Oracle Corporation

7.1.8 CaseGuard

7.1.9 COBAN Technologies Inc.

7.1.10 Porter Lee Corporation

7.1.11 Finalcover LLC

7.1.12 IBM Corporation

8 INVESTMENT ANALYSIS

9 FUTURE OF THE MARKET
