Abstracts

Innovations have contributed to the availability of a range of new treatments for diseases resulting in improvement in the length and quality of life and reduced disease burden for individuals and society. However, the need for innovative therapies for unmet needs /challenging diseases continues to grow, accelerating the pace of drug development directly or through partnership/ in-licensing. We expect innovation and improved drugs therapies through novel target discovery and technology platforms to continue to flow from the backyards of small research focused companies (Rising Stars, RS – non-profitable biotech companies) in coming years.

Approval of new drugs, successful launches, maturing pipeline sustained the growth trajectory of biotech companies resulting in successful IPOs. We expect the optimism to percolate further into companies with novel technology platforms and targets. For more details on the trend in drug approvals, upcoming milestones and M&A in coming years please see Global Pharmaceutical and Biotechnology Outlook 2013: Rising Stars
