Introduction

Cardiovascular Information System (CVIS) is a system that provides easy access to cardiovascular electronic medical records (EMR) in images, reports, and waveforms in multiple locations in the real-time, which facilitates virtual cardiac care. CVIS is used to endorse clinical data collected with a high level of evidence-based quality by using the software.

Factors influencing the market growth are the increasing prevalence of cardiovascular diseases, growing government initiatives towards the implementation of electronic health record system, technological advancements in CVIS and rising demand for data-driven technologies. On the other hand, high cost of CVIS followed by the need for training can limit the growth of global cardiovascular information system market during the forecast period.

The global cardiovascular information system market has been segmented on the basis of component, deployment, application, end user and region. Based on component, the market has been divided into hardware, software, and services. On the basis of Deployment, the global cardiovascular information (CVIS) system market has been segmented into on-premise and web/cloud-based model.
