Abstracts

Big Data is a vital strategic tool for telecom operators and MVNOs which can prevent revenue decline and identify the trend affecting markets globally. Big Data enables Telecom companies to leverage one of their strongest hidden assets, customer insights. Big Data technologies facilitates Telecom companies to capture, analyses and monetize large volumes of customer information and interaction data across multiple touch points in real time.

With the right information and feedback, telcos can improve profitability by optimizing network services/usage, enhancing customer experience, and improving security. With emergence of technologies like Hadoop framework and NoSQL databases, it became far more affordable to run analytics on large set of data.

The few Use cases for Telcos:

Predicting the periods of heaviest network traffic and solution to control congestion

Identifying the customers most likely to defect, and targeting steps to prevent churn

Identifying the customers most likely to have problems in using services like paying bills, data speed and other function which are accessed through mobile apps.

Predictive analytics can find out these pain points for companies and provide step by step recourse to nullify problems and necessary steps to prevent these to occurring in future.

The objective of this research study is to understand the current big data market in Telecom sector across the world and to estimate the growth rate for the next 5 years.
