Abstracts

Global agricultural equipment market faced various changes from past decades to current period. Dependence on machinery for farming has seen a significant raise through time. This industry is on positive lines for growth in future periods. Global agricultural equipment market is expected to grow at CAGR of 2.71% till 2021. Asian markets demand penetration majorly India and China are expected to be highest among all markets. Industry trends towards increasing features of advanced technology developments in machinery.

This sector offers huge opportunity for firms to grow in future as there is consistent decrease in agriculture labor and farm mechanization plays major role to meet drastic increase in demand. Major players have witnessed many challenges which have great impact on volumes and revenue. Strategies made on the basis on pain point areas succeeded and provided results on a positive line. Key players have worked on those strategies to overcome unanticipated effects of weather and farmer's livelihood.

The main talking point in the industry is the decrease it had over the past 2 years. This is due to the reason that the farmer's income decreased due to decrease in the commodity prices. The experts say that the bottom level has been reached and now the industry will flatten out and are showing signs of recovery. The industry is not expected to reach to the high growth levels it reached out around 2012-2014, but it's expected to show minimal increase every year.

Geographically, things would be different, Asia-Pacific would grow at a rapid pace, considering few of its major countries have started their journey of mechanization. South America and Africa is going to show steady growth. Europe is one which is not yet clear, due to the impeding impact of Brexit and region instability. North America will

soon be back to the growth ladder, although it won't be a steep one.
