Abstracts

According to the data from the World Bank, world population in the year was nearly 7.347 billion and it will increase to 8.5 billion by 2030. This growth of population puts tremendous pressure on the food and agriculture industry to provide healthy and sustainable food products to this growing population.

In the recent years, due to the increase in disposable income among the people of the developing countries, where the population growth rate is maximum, there is a trend of increasing demand for meat products. With decreasing farm space and pressure on the farm producers to maximize their products, feed additives are a sustainable way to increase the efficiency of the farm output.

Additives have been used as growth promoters in animals since World War 2. With time, usage of many of the antibiotics gained focus and after that had a declining trend due to its effect on the environment after use. Due to industrialization these feed additives are made available to the producers at a very affordable cost which makes the additives a favorable option for them. As people are more concerned about the chemicals in their food, feed additive market moved towards more natural ways of growth promoters in animals such as prebiotic and probiotic.

There are many players in the market but top 10 industries hold most of the market share. These company have a huge research and development expenditure to meet the growing demand of the growing population. These players operate across the globe and have their unique USP's to provide value to the end users.

Major feed additives prevailing in the market are Vitamin, Antibiotics, Enzymes, Antioxidants, Amino Acids, Minerals, Prebiotic and Probiotic. The major animal types

being used in the report are ruminants, poultry and swine. The major geographical regions considered in this report are North America, Latin and South America, Middle East and Africa, Europe and Asia Pacific. All of the above mentioned categories have been thoroughly analyzed in this report.

Additives are the next big things in the animal feed market due to their efficiency, productivity as well as due to their profit generating capacity. The future market has a great scope for this market.
