Abstracts

The report is sent in 0-2 business days after order is placed.

The new report, 'Big Data Market in India', highlights the current as well as the future big data market scenario in India. The report furnishes explicit details on the crucial aspects of the overall market to provide a holistic view, with the aide of crisp and insightful representation of market data.

Currently, the market is at its growing stage and is mainly dominated by foreign vendors who have managed to mark a significant presence in the country. With the continual growth in computerization and digitization across all verticals, amount of data generated is skyrocketing on a daily basis. Additionally, the vast demographic diversification prevailing in the country will further technology adoption amongst business of all nature, thereby amplifying digital data generation by manifolds.

Some factors such as the burgeoning internet usage across the nation, emergence of smart handheld devices and the explosion in the social media domain were identified to be prime reasons driving the big data market. While the key hindrances for the market comprise of the lack of big data handling expertise, severe time constraint to analyze data and the lurking threat to data security and integrity.

As seen in the market, proper analysis of the big data so generated has not yet attained full swing in the Indian market. Currently a very small fraction of the market comprises of big data analysis and hence this opportunity can be effectively targeted by vendors to garner a stronger foothold in the market for better revenue generation.

Contents

Slide 1: Executive Summary

MACRO ECONOMIC INDICATORS

Slide 2: GDP at Factor Cost: Quarterly (2009-10 – 2012-13), Inflation Rate: Monthly (Oct 2012 – Mar 2013)

Slide 3: Gross Fiscal Deficit: Monthly (Sep 2011 - Feb 2012), Exchange Rate: Monthly (Nov 2012- Apr 2013)

Slide 4: Lending Rate: Annual (2008-09 – 2011-12), Trade Balance: Annual (2009-10 - 2012-13), FDI Annual (2009-10 – 2012-13)

MARKET OVERVIEW

Slide 5: Big Data Market Overview India, Big Data Market Size Value India, Big Data Market Size Volume India & Global Big Data Market Share India

Slide 6: Big Data India – Sneak Peak 2013

Slide 7: Big Data Benefits

BIG DATA CLASSIFICATIONS

Slide 8: Big Data Classifications

BIG DATA WORK FLOW

Slide 9-10: Big Data Work Flow

BIG DATA CONSIDERATIONS

Slide 11-12: Big Data Implementation – Design Aspects

MARKET INFLUENCERS

Slide 13-14: Big Data Formation – Summary

Slide 15-21: Market Influencers

TRENDS

Slide 22: Trends

COMPETITIVE LANDSCAPE

Slide 23: Porter's Five Forces Analysis

Slide 24-26: Competitive Benchmarking

Slide 27-85: Major Private Players

STRATEGIC INSIGHT

Slide 86: Strategic Insight

APPENDIX

Slide 87: Appendix

Slide 88: Sources of Information

About

Market

Big data market was worth more than INR xx bn in the year 20-- and is expected to attain a whopping CAGR of more than yy% to reach INR zz bn by the year 20-

In the year 20—, big data in India was estimated to be approximately abc Exabytes and is expected to grow exponentially to reach about abc Zettabytes by 20—

Consequently, India's share in the global big data market will also increase to xxx% in the year 20- - from yyyy% in 20—

Big data can be broadly classified as the following:

Size

Speed

Diversification

Valuation

The market influencers for the big data market in India can be enlisted as below:

Burgeoning internet usage

Emergence of smart handheld devices

Explosion in social media usage

Big Data Market Overview – India

As of now, adoption levels are still at its nascent stage, thereby offering ample opportunities for vendors to capitalize on

Some of the key industry verticals to adopt big data include telecom, healthcare and oil & gas

Demographic diversification in India will push businesses to adopt technology oriented business models, which in turn will fuel the growth of big data in the near future

Some of the most important design aspects of big data implementation includes the following:

Cluster Design

Application requirements pertaining to workload and volume are analyzed

Being a non-iterative process, design of the cluster is checked and validated in advanced with the help of test data and applications

Hardware Architecture

A careful designing of the hardware architecture is extremely important as the hardware costs are directly proportional to the system's scalability

Special focus should be given at the quality of the equipments being procured

Network Architecture

- Network architecture much like hardware architecture needs to be planned well ahead in time so as to avoid over or under estimated network deployment and should be aligned according to the hardware architecture
- A full proof and efficient network architecture guideline is the key to a successful big data solution implementation
