Latin America Conjugate Vaccine Market:

Conjugate vaccine is a type of vaccine that contains bacterial capsular polysaccharide, attached to a protein to enhance immunogenicity and protect against invasive diseases. Latin America is a market with a significant growth rate for conjugate vaccines. The conjugate vaccine market in Latin America is expected to grow at a CAGR of 20.4% leading to revenue of USD 5.43 Bn by 2023. By volume, it is anticipated to reach 839.21 Million units by 2023, expanding at a CAGR of 20.19%.

Market Segmentation:

Based on disease indication, the market is segmented into pneumococcal, haemophilus influenza type B, diphtheria-tetanus-pertussis, meningococcal and others.

Based on end user, the market is segmented into paediatric and adult.

By countries, the Latin American market is divided into Brazil, Argentina and the Rest of LATAM.

Key growth factors:

Latin America has a growing market owing to increase in the incidence of chronic diseases, government initiatives, and control strategies.

Threats and key players:

The Latin America Conjugate Vaccine market is expected to grow positively. There are still a lot of gaps to be filled for a higher penetration of such vaccines among the masses. A dearth of data on Hib disease burden and limited awareness of Hib disease has resulted in a lack of advocacy for the introduction of Hib vaccine in some countries. Highly complicated manufacturing processes, pricing inefficiencies and lack of accessibility are some of the major obstacles in the growth path, which need to be addressed.

Conjugate Vaccine providers operating in the market are Pfizer Inc., Merck, Novartis, Sanofi Pasteur, CSL Limited, etc.
