Abstracts

The Global Business Jet Market has been cruising steadily with strong demand for new & used jets with the industry witnessing a virtual windfall for order intake along with robust order books & surging backlogs driven by growing demand for private travel boosting demand for jets across segments, especially, with a large number of first time buyers entering the business aviation market. The book-to-bill ratios have been rising across industry OEMs while fleet utilization, too, continues to soar across the North American & European markets, thereby, bolstering MRO activity and service revenues for the industry. However, the industry has also been facing headwinds in form of continued challenges emanating from global macroeconomic uncertainty and the ongoing Russia-Ukraine War which has caused supply chain disruptions, strains & bottlenecks apart from production disruptions owing to shortfall & rising material as well as input costs. Surging demand & fleet utilization levels have been pushing the industry value chain to the brim while spiraling up crude oil prices globally have been impacting profitability across fleet operators.

Further, looming sustainability challenges necessitate the aviation industry to push the envelope on the technological front to make steady & active progress towards transition to clean transportation with the development of a range of sustainable aviation technologies geared towards effective de-carbonization over long term. The options have been led by increasing the usage of sustainable aviation fuels (SAFs) as the most feasible, near-term solution while taking steady steps towards transition to electric and hydrogen based propulsion over long term.
